

Normal filtering, some events passed

After Tunnel message to second Gateway

Implemented as a single stream:

Gateway3 --> ConfigTool [ev, snid, event#, dg, snid, dnid, dlen, d0, ..., dn, ...]

Or as Datagrams:

(Gateway3, ConfigTool, event, snid, event#)

(Gateway3, ConfigTool, datagram, snid, dnid, dlen, d0, ..., dn)

...

Note, this requires the ConfigTool to 'unwrap' the contents of the stream or datagram.
